Input | Output

STATE OF

Cardano Governance

Report Outline

Commissioned by Cardano DReps; delivered by IO and Cardano Community Members including:

- Fanny Wijaya
- Ken Erik Oelmheim
- Maureen Wepngong (Giiyo Tech)
- Max van Rossem
- Nana Safo (Wada Global)
- Richmond Oppong (Wada Global)
- Tevo Kask

Table of Contents

1. Executive Summary 1

2. Introduction 1

2.1. Purpose And Scope 1

2.2. Background On Cardano 1

2.3. Importance Of Blockchain Governance 1

3. Methodology 1

3.1. Governance Measurement Framework (Gmf) 1

3.2. Data Collection Methods 1

3.2.1. Quantitative Methods 2

3.2.2. Qualitative Methods 2

3.3. Analytical Methodology 2

4. Cardano Governance Framework Overview 2

4.1. Governance Principles And Philosophy 2

4.2. Current Governance Structure 3

4.3. Historical Evolution 3

5. Key Findings By Gmf Category 3

5.1. Ada Holder Metrics (Legitimacy & Participation) 3

5.2. Drep Metrics (Decentralization & Accountability) 4

5.3. Spo Metrics (Security & Oversight) 4

5.4. Constitutional Committee Metrics (Constitutional Adherence & Veto Oversight) 4

6. Governance Action Analysis And Parameter Observations 5

6.1. Governance Action Type 5

6.2. Governance Parameter Observation 5

7. Recommendations And Forward Path 6

7.1. Short-Term Recommendations (0–6 Months) 6

7.2. Medium-Term Recommendations (6–18 Months) 6

7.3. Long-Term Strategic Considerations 6

8. Conclusion 6

1. Executive Summary

A concise overview (1-2 pages) highlighting the key findings of the assessment, major governance strengths and challenges, and high-priority recommendations. This section will provide busy stakeholders with essential information about Cardano's current governance state.

2. Introduction

2.1. Purpose and Scope

Definition of the report's objective: a point-in-time assessment of Cardano governance using the approved Governance Measurement Framework (GMF). Clarify inclusions, exclusions, and limitations.

2.2. Background on Cardano

Brief overview of Cardano's history, mission, and unique position in the blockchain ecosystem, with emphasis on its governance evolution.

2.3. Importance of Blockchain Governance

Discussion of why effective governance is critical for blockchain protocols, particularly for Cardano's long-term sustainability and decentralization goals.

3. Methodology

3.1. Governance Measurement Framework (GMF)

Detailed explanation of the Governance Measurement Framework used, including its development process and theoretical foundations. Including: domains, principles, metric categories for ADA Holders, DReps, and SPOs.
(Full metric definitions, tables, and formulas are available in the Appendix Repository)

3.2. Data Collection Methods

Data collection is organized into Quantitative Methods and Qualitative Methods to ensure a balanced, multi-perspective assessment of governance health.

3.2.1. Quantitative Methods

Objective, verifiable data derived from on-chain activity and system records, including:

- On-chain governance data (DB Sync, ledger state, governance snapshots)
- Delegation and voting records for ADA holders, DReps, and SPOs
- DRep registration, activity, and rationale publication metadata
- Participation metrics (voting stake, unique addresses, delegation changes)
- SPO engagement and parameter-change votes
- Epoch-based snapshots used for metric calculations in alignment with GMF
- Delegation Patterns

3.2.2. Qualitative Methods

Contextual and perception-based insights essential for interpreting quantitative findings, including:

- **Semi-structured interviews** with DReps, SPOs, CC members, proposal contributors
- **Ecosystem workshops** and governance roundtables
- **Community perception surveys** distributed across governance platforms
- **Public comment submissions** (open review periods, forum discussions)

These sources help explain behaviors, motivations, informational friction, and emerging governance norms.

3.3. Analytical Methodology

Methods for interpretation and synthesis, including:
This section explains how the GMF's internal metric categories are translated into the broader, publicly readable Governance Measurement Framework used in Section 4 of the report. Additionally, including explanations of limitations of measurement such as on-chain data cannot capture, behavioral interpretation constraints, the roles of founding entities, genesis Ada participation and measurement boundary clarification.

4. Cardano Governance Framework Overview

4.1. Governance Principles and Philosophy

Explanation of the core principles guiding Cardano's approach to decentralized governance and decision-making. Core values: decentralization, transparency, accountability, resilience, and community empowerment.

4.2. Current Governance Structure

Overview of Cardano governance under CIP-1694, including constitutional roles and decision-making flows.

4.3. Historical Evolution

Brief history of how Cardano's governance has evolved from inception to present day, highlighting key milestones and transitions. Cardano's governance journey from Shelley to the Constitutional era.

5. Key Findings by GMF category

Each subsection includes:

- Measurement of each metric, including time series where relevant
- Interpretation based on historical precedents and critical governance events
- Strengths
- Challenges
- Illustrative examples
- Links to evidence in Appendix Repository
- Visualization the Percentage of Circulating Ada and Actively Voting on Governance chart.
- Visualization represents the average engagement level seen in DAOs and represent the average/range of engagement in democratic votes across countries

5.1. ADA Holder Metrics (Legitimacy & Participation)

This subsection evaluates ADA holder participation patterns, the breadth of representation, and the dynamics of delegation under Cardano's liquid democracy model.

Analytical components include:

- Historical participation trends across governance cycles
- Comparative observations relative to voting participation rates in other PoS networks
- Lessons learned from prior low-turnout periods and communication bottlenecks
- Strengths such as increased address engagement or improved delegation patterns
- Challenges including concentration, disengagement, or informational friction

5.2. DRep Metrics (Decentralization & Accountability)

This subsection assesses the distribution of delegated voting power, DRep activity levels, transparency practices, and accountability norms.
Analytical components include:

- Historical shifts in DRep registration, activity, and rationale publication
- Comparative insights on representative decentralization from other DAO and liquid-democracy systems
- Lessons learned from inactivity waves, coordination failures, or rationale-related disputes
- Strengths such as improved vote justification or power distribution
- Challenges such as centralization pressure or inconsistent activity patterns

5.3. SPO Metrics (Security & Oversight)

This subsection analyzes the engagement of Stake Pool Operators (SPOs) in governance oversight, vote participation on security-critical actions, and stability of delegated stake.
Analytical components include:

- Historical patterns from hard-fork approvals and protocol-parameter decisions

- Comparative insights from validator-based oversight models in other blockchains
- Lessons learned regarding coordination resilience, communication gaps, or timing mismatches
- Strengths such as oversight consistency, network-level resiliency, or stable delegation
- Challenges including uneven participation, information asymmetry, or operational constraints

5.4. Constitutional Committee Metrics (Constitutional Adherence & Veto Oversight)

Note: Currently, the Constitutional Committee (CC) has not been fully implemented in Cardano's on-chain governance system. The following analysis is a prospective measurement framework based on the design of CIP-1694 and governance best practices, to be applied once the CC is operational.
Analytical components will include (upon full implementation):

- Measurement Approach: Tracking of on-chain CC actions (vetoes, approvals), off-chain deliberation activity, and member rotation events. Time-series analysis will begin after the first full governance cycle with an active CC.
- Interpretation: Initial assessments will be based on the alignment between CC actions and the written Cardano Constitution, with comparisons to similar oversight bodies in traditional and digital governance.
- Strengths (Anticipated): Ability to prevent constitutional violations, provide clear legal interpretation, and serve as an independent guardian of the ecosystem's long-term values.
- Challenges (Anticipated): Risk of inactivity, difficulties in interpreting ambiguous constitutional clauses, and political pressure on committee members.

6. Governance Action Analysis and Parameter Observations

6.1. GOVERNANCE ACTION TYPE

Instead of aggregating all governance actions, participation and outcomes will be analyzed separately by:

- Budget-related actions
- No-confidence actions
- Protocol parameter changes
- Constitutional amendments

Participation patterns will be compared across action types to identify behavioral differences and governance dynamics.

6.2. GOVERNANCE PARAMETER OBSERVATION

This section will be includes interpretive analysis based on finding above:

- Evaluation of voting window duration
- Participation concentration timing (early vs late epoch activity)
- Any observable red flags (e.g., last-minute vote clustering, low engagement in critical actions)
- Whether certain governance action types show structural participation issues
- Recommendations if parameter adjustments may be beneficial

7. Recommendations and Forward Path

7.1. Short-Term Recommendations (0–6 months)

Actionable recommendations that can be implemented quickly to address immediate governance challenges

7.2. Medium-Term Recommendations (6–18 months)

Strategic recommendations requiring more substantial planning and resources to strengthen governance capabilities

7.3. Long-Term Strategic Considerations

Visionary recommendations for the future evolution of Cardano's governance to achieve its ultimate decentralization goals.

8. Conclusion

Summary of the current state of Cardano governance, highlighting the balance between achievements and ongoing challenges, with emphasis on the path forward. Final synthesis summarizing governance health, systemic insights, and future directions aligned with Cardano's constitutional governance vision.
